PARTNERSHIP WITH VERMONT FISH and GAME

Through a partnership with Vermont Fish and Wildlife students have raised local trout to help stock Vermont's Otter Creek. Having raised the fish by first caretaking for the eggs as they hatched and grew, students cleaned, fed, and maintained optimal tank conditions, getting them ready for delivery to Danby. With the help of Fish and Game students will release the trout on May 29th!

We are all grateful to the students who worked hard to ensure so many fish would make it, helping keep our local waterways full of trout. Their dedication to this work has been an example of what one small group of students can do to help us all.

RUTLAND MAKER'S SPACE BUILDING PROJECTS

Two students have also been working at our local Maker's Space to design and build with wood and metal. One student worked hard to create a functional, comfortable, and stylish chair, while another has now designed and built two beautiful Vermont style cutting boards.

ASC GARDENING: SEEDS TO PLANTS

While one group of students was raising trout, another group has been busy planting seeds and raising plants that are now being transplanted into our campus garden. These plants include tomatoes, cilantro, mint, and basil, amongst others, and will be harvested this summer and fall for our cooking classes.

Students in our summer program will water and weed the garden to ensure that all is ready for cooking when we return in September.
